

Informatics, Artificial Intelligence and Control Systems Faculty as a Digital transformation Cluster

NATURAL AND ARTIFICIAL INTELLIGENCE HARMONYZATION

BACKGROUNDS:

- INFORMATICS,
- NEUROPHYSIOLOGY,
- CYBERNETICS

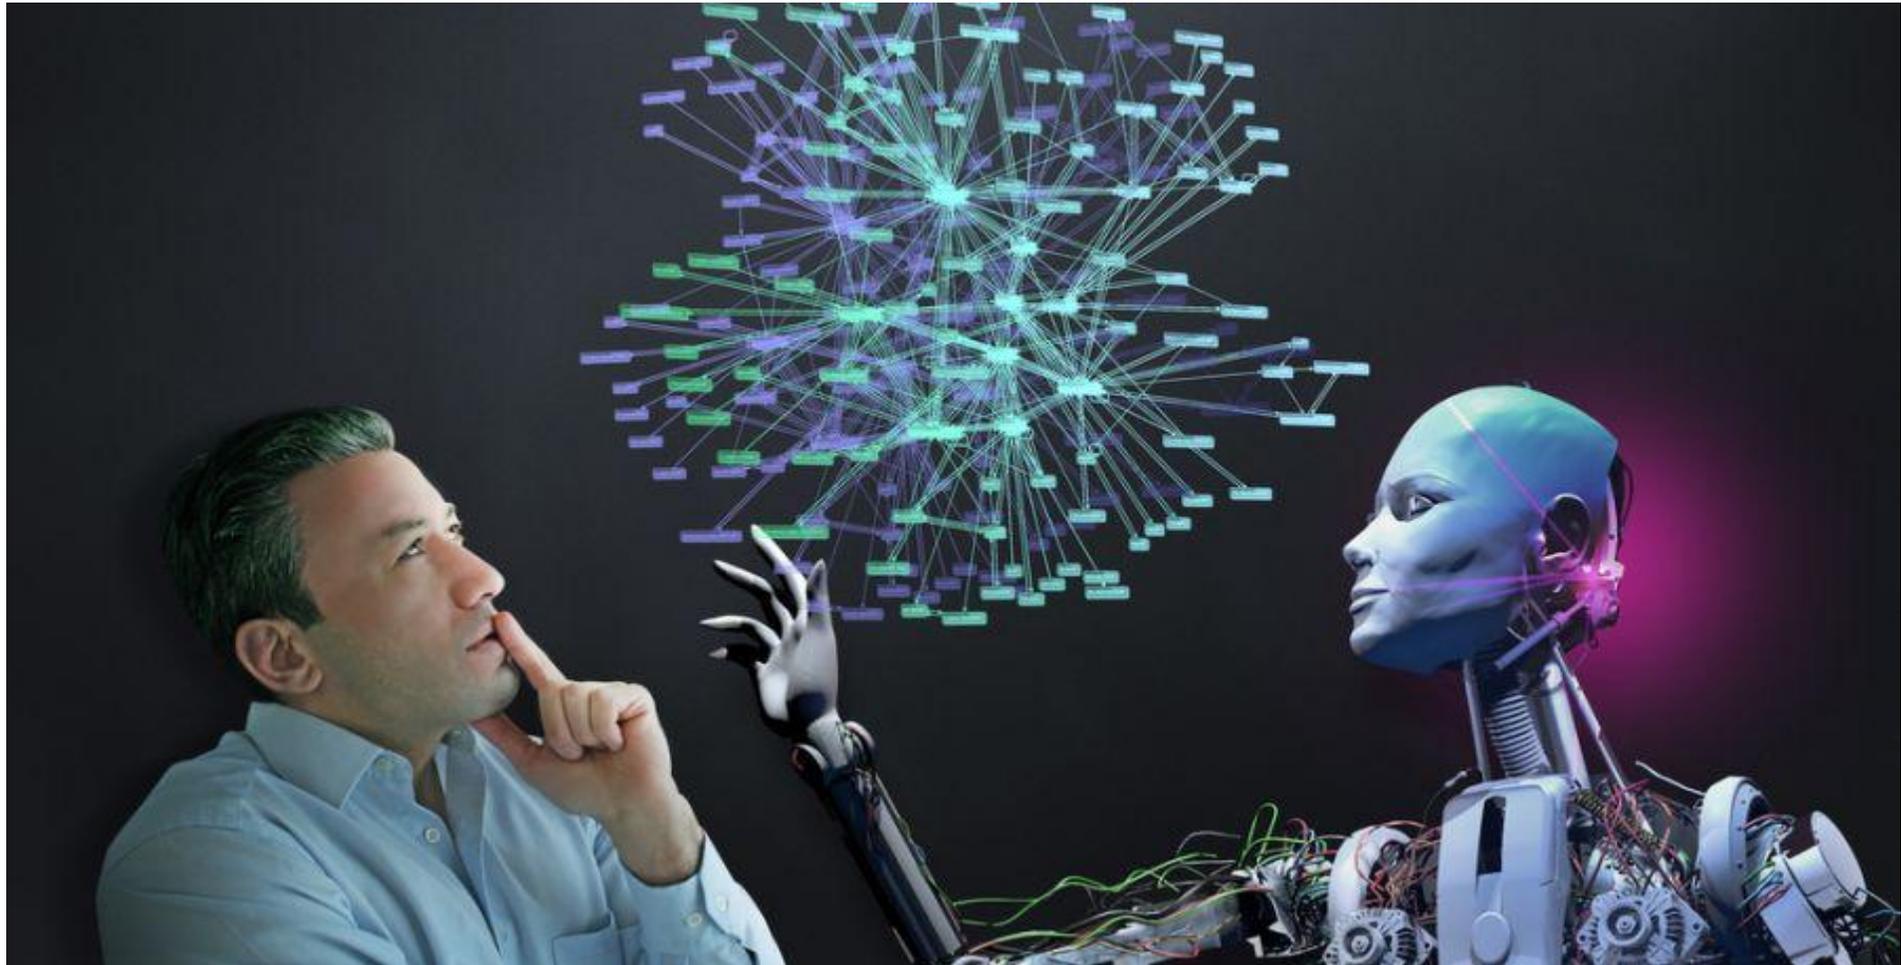

1948 - 1988 **Academician Solodovnikov V.V.** Head of automatic control systems department (IU1) created following theories:
automatic control,
complexity,
methods of object's identification,
analytical self-adjusting automatic systems, etc.

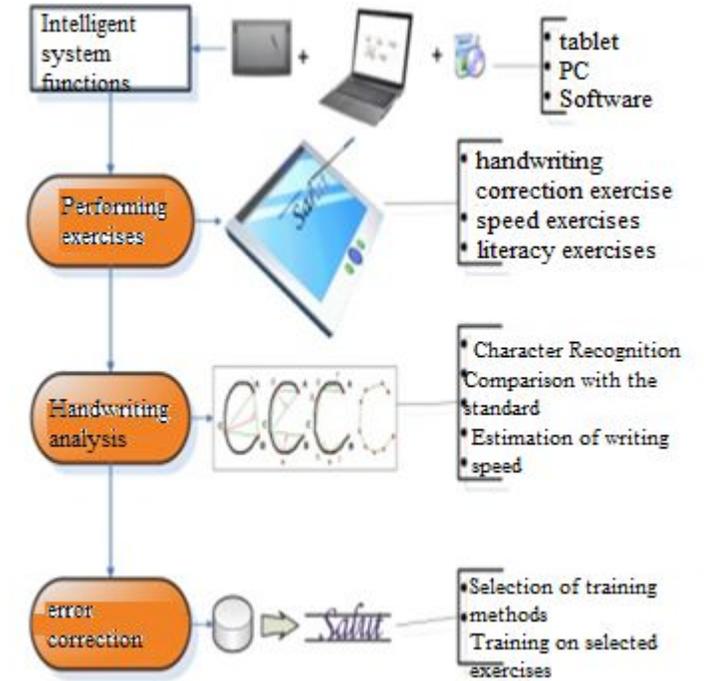

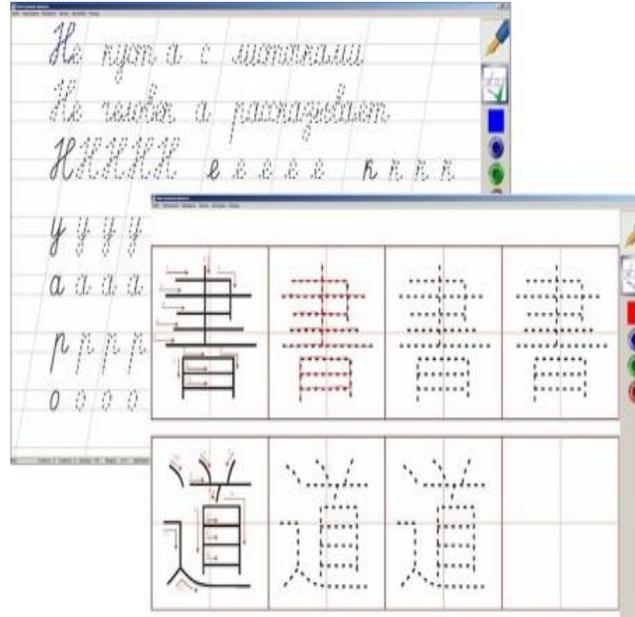

1989 - 1999 **BMSTU Scientific Program "Intelligent Systems"**
Artificial Intelligent Systems Theory and Practice were created

2000 - nowadays **Experimental Design Research** on advanced control systems, including those with intelligent components, dynamic objects

COMPLETED PROJECTS OF ARTIFICIAL INTELLIGENCE TECHNOLOGIES

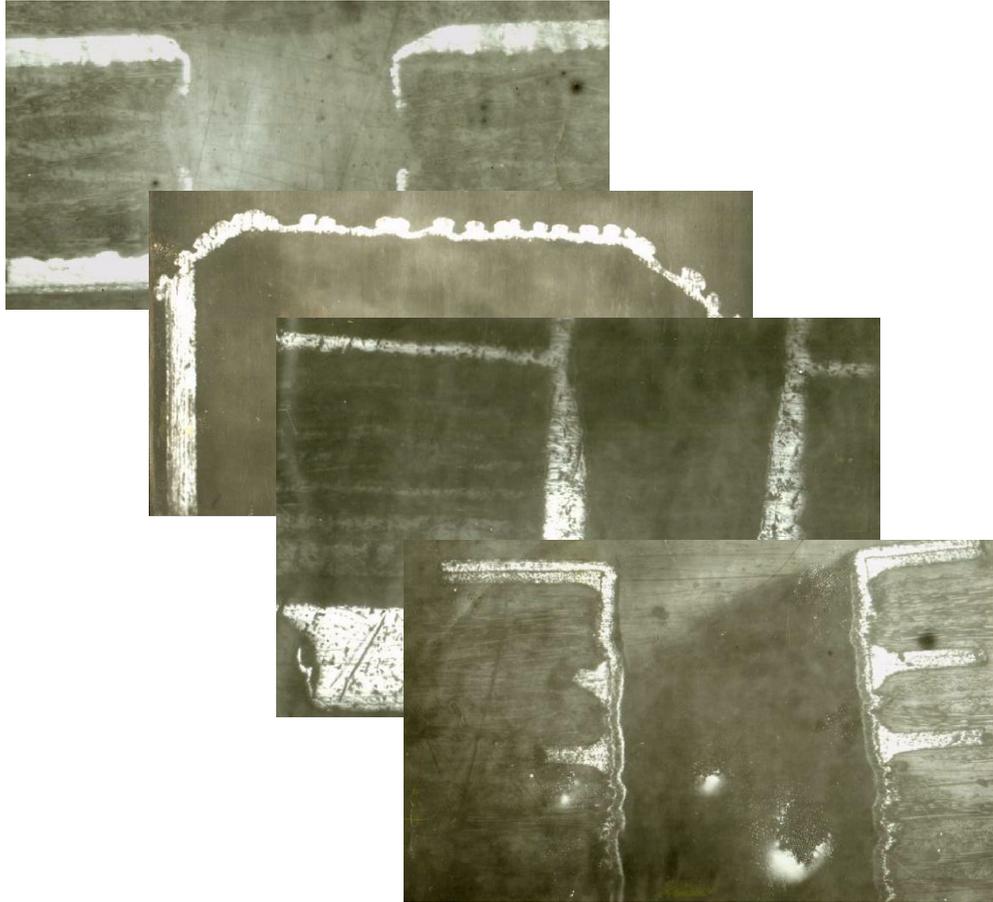

In Medicine: ARTIFICIAL INTELLIGENCE REHABILITATION COMPLEX

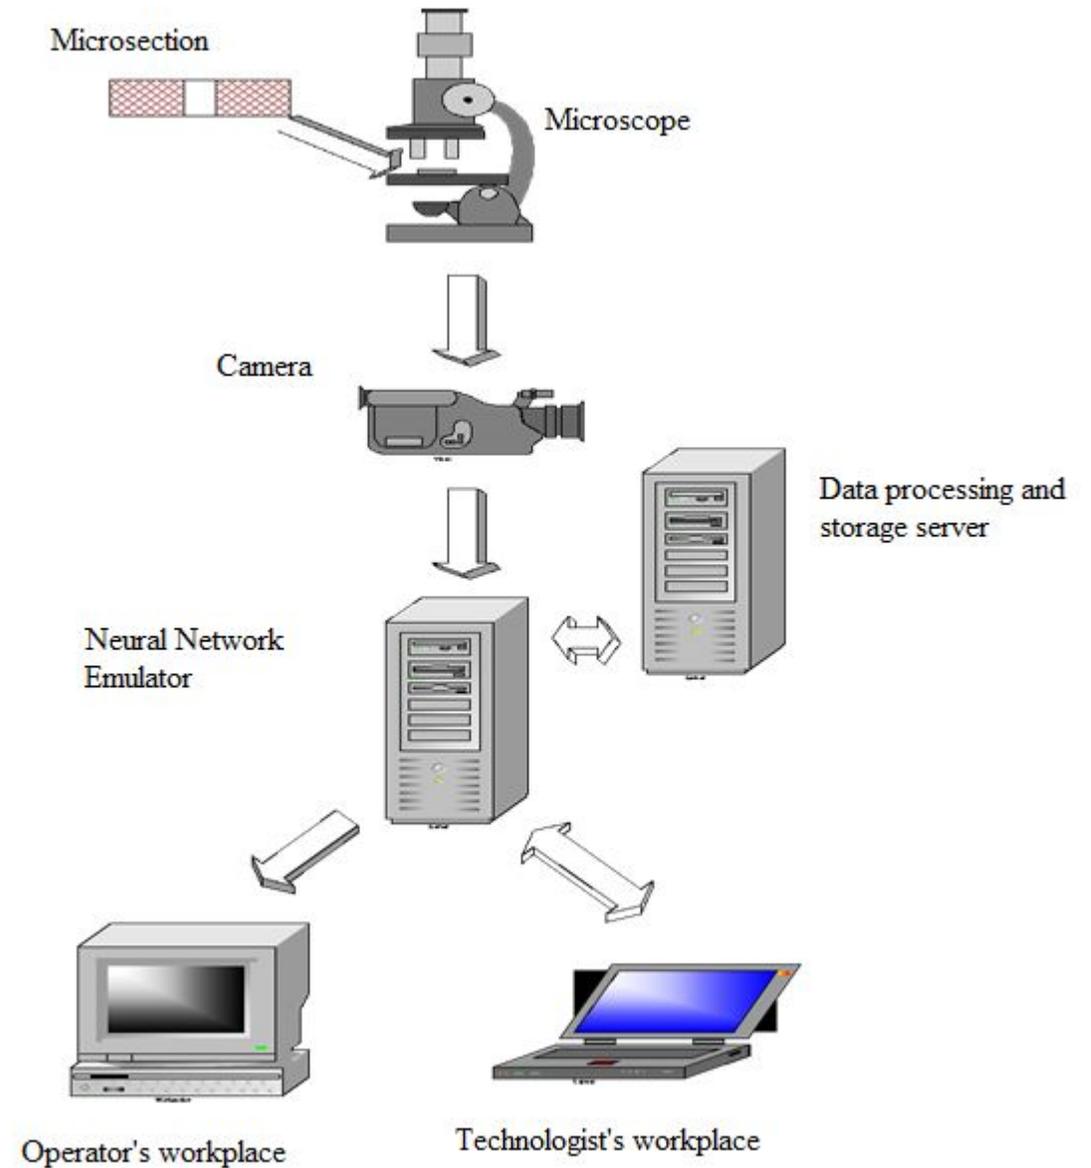

Patient's fine motor skills restoration with vascular diseases of the brain

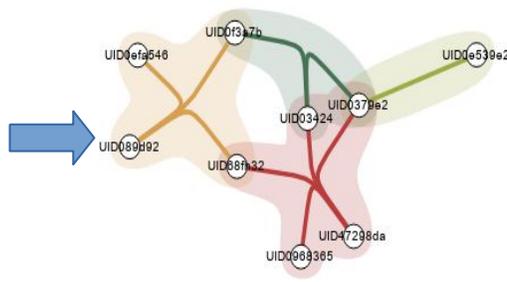

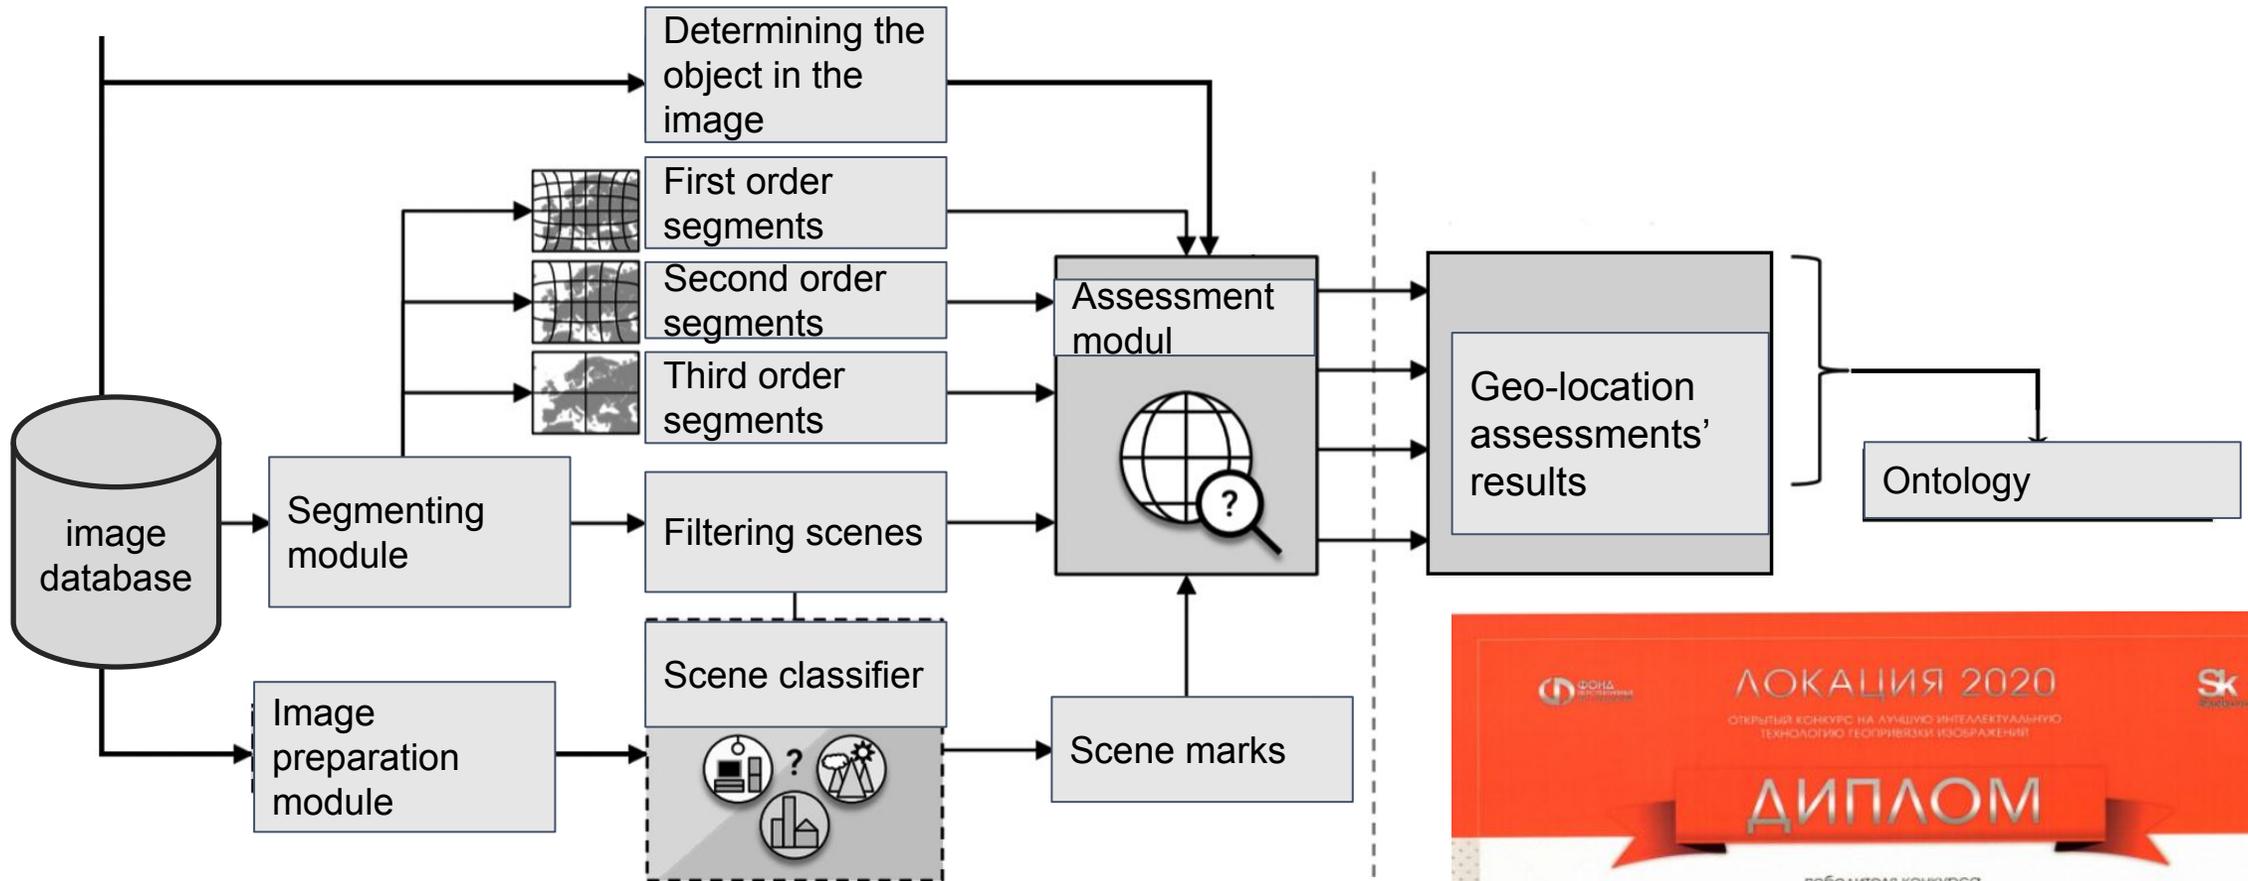

In Technology: IMAGE RECOGNITION SYSTEMS

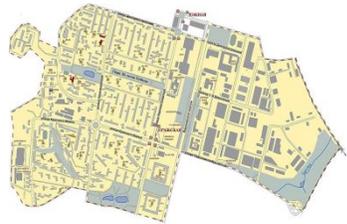

Typical defects of metallized PCB holes

In Technology: HYBRID INTELLIGENT SYSTEM FOR DETERMINING THE LOCATION OF OBJECTS BASED ON THEIR PHOTOS

In Technology: Video-information intellectual control system

On the territory of the Chertanovo Central district :
 174 residential apartment buildings;
 Each house has from 1 to 16 entrances;
 741 surveillance cameras
 the entrance area.
 To reduce the decision-making time for cleaning the territory, the cleanliness
 control system of the entrance area uses artificial intelligence methods.

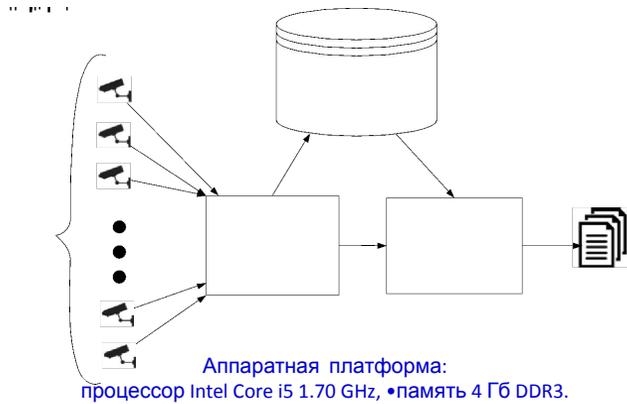

Dispatcher's workplace

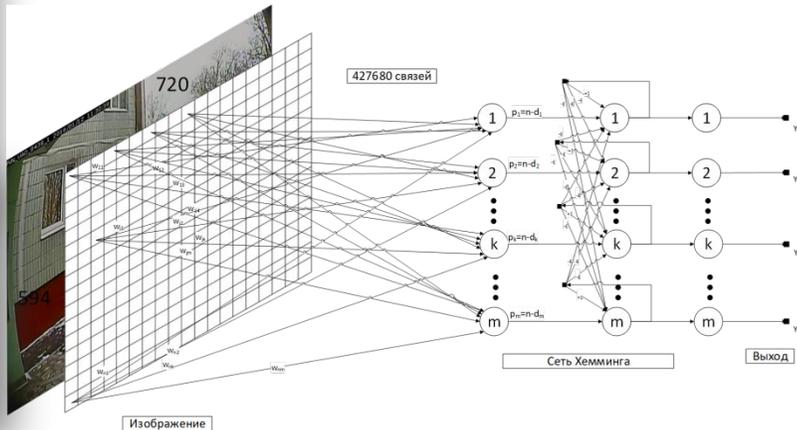

Images obtained from CCTV cameras

Архитектура системы

The resolution of the video surveillance cameras is 720x576 pixels

Examples of system reports for 1-10.01.2016

Reports are sent to officials on mobile devices

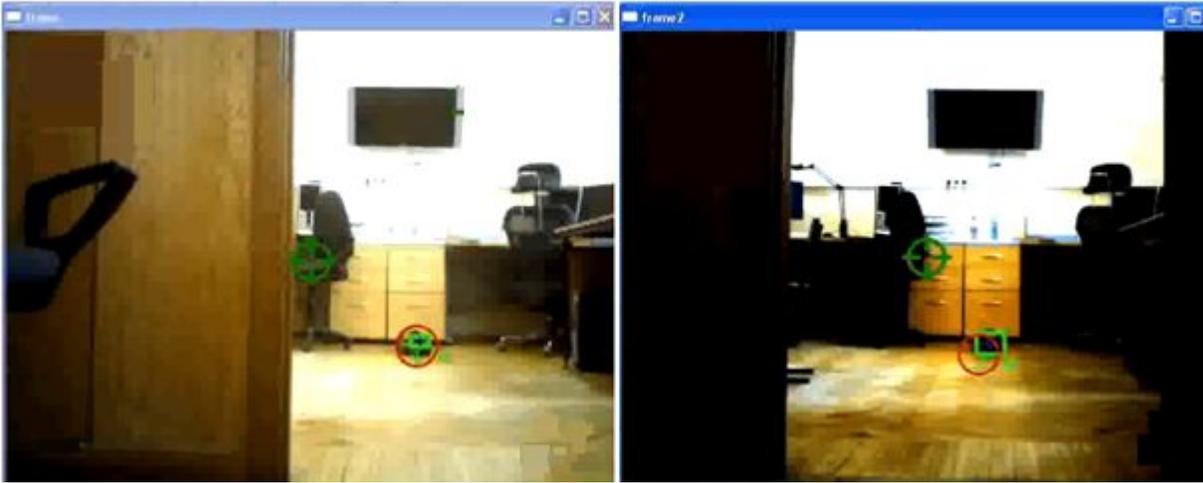

Directions for further work on improving the system

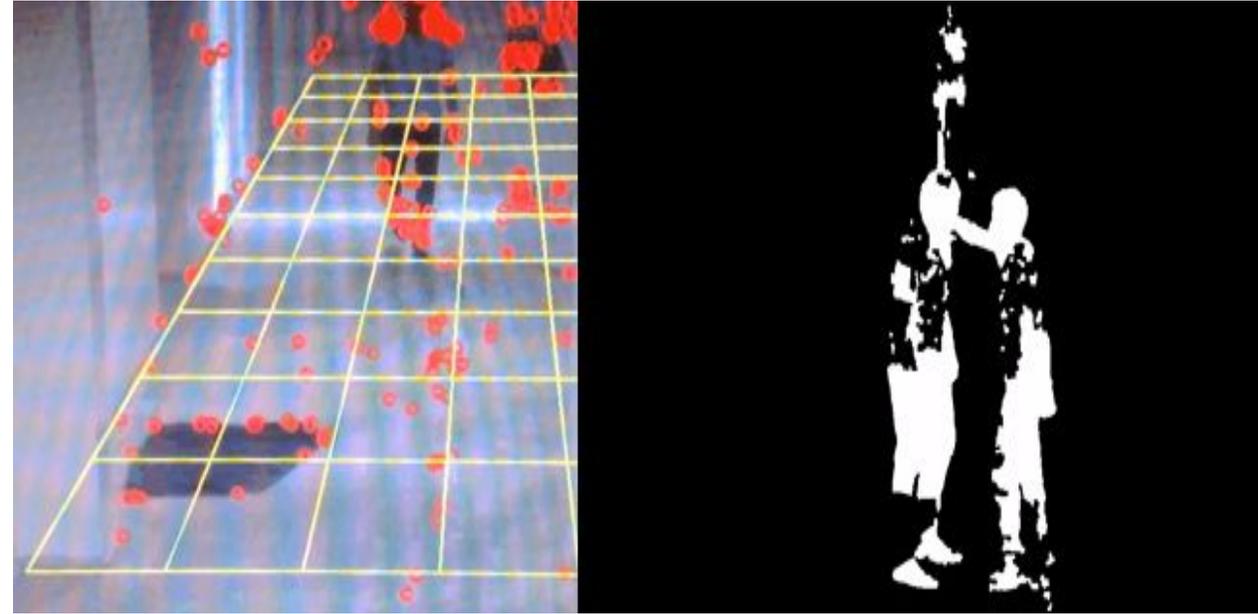

1. Control of events for the portal "Our City";
2. Year-round analysis of the state of the territory;
3. Control of container sites;
4. Control of places of unauthorized trade;
5. Control of the movement of special equipment.

Research of the Foundation for the Promotion of Innovation - the development of a computer vision algorithm for capturing and tracking a moving object and determining the parameters of the object.

RFBR Research and Development - the development of an artificial intelligence software platform for the recognition of abnormal behavior.

Research and Development of the Ministry of Education and Science of the Russian Federation - capturing and tracking an object from a variety of video cameras in difficult conditions

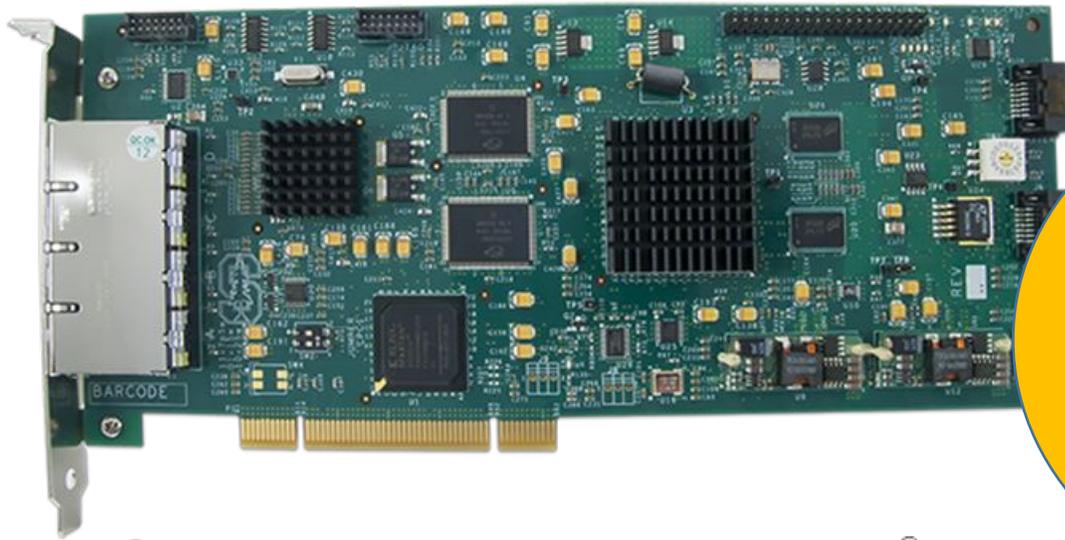

artificial intelligence in the decision-making algorithm for puncturing the wall of a venous vessel with an injection needle

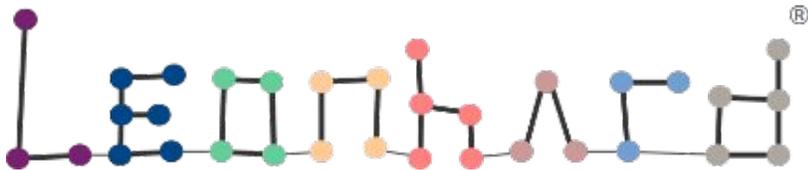

In Education: SW & HW AI Complex on HETEROGENEOUS Supercomputer

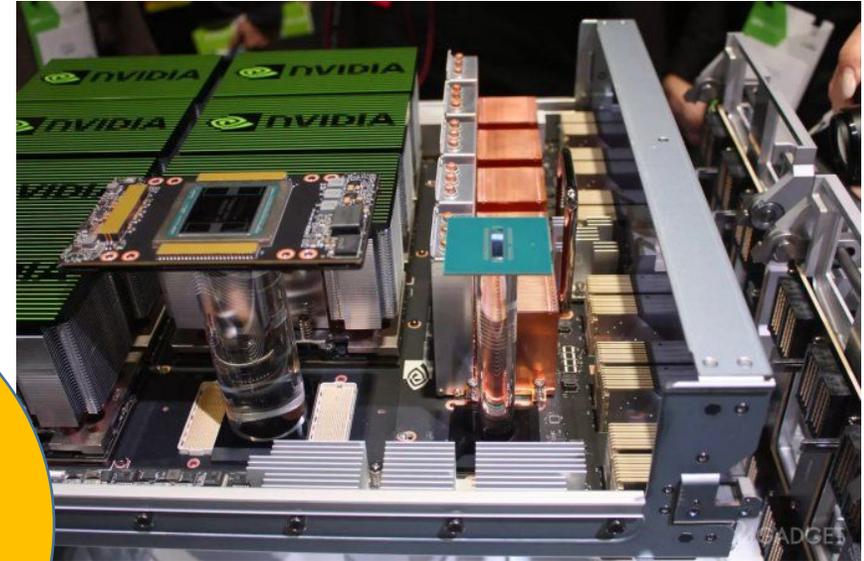

Original processor manipulating with datasets, data structures and graphs has been developed at BMSTU as a part of the National Security Threat Prevention System

Heterogeneous SuperComputer

Super-server NVidia DGX2

Computing Accelerator Xilinx ALVEO U200

Students AI Projects' Competitions:

April 2016
12 projects
Distributed cyber-physical systems of the Internet of Things (jointly with IBM)

November 2016
15 projects
Systems based on energy-efficient long-range radio communication networks

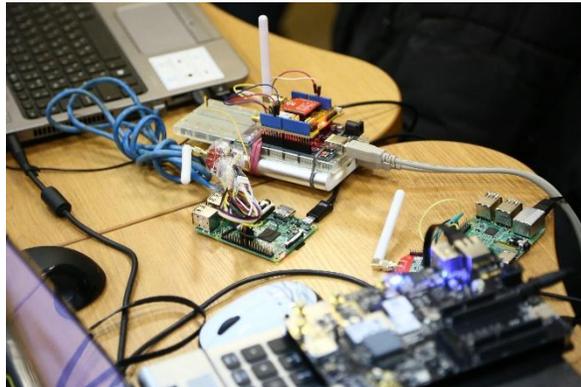

November 2017
24 projects
Brain-computer interface-based systems (jointly with IBM)

November 2018
24 projects
Cloud medical Services and Blockchain (together with the First Sechenov Moscow State Medical University)

November 2019
23 projects
Artificial Intelligence in Medicine (together with the First Sechenov Moscow State Medical University)

November 2020
26 projects
Artificial intelligence in the field of security (with the Ministry of Internal Affairs)

November 2021
Technologies for accelerating the computing process

Where and how:

Programming Center «TechnoPark Mail.ru»

ТЕХНОПАРК
14.11.2013 "Яблочная разработка", Обухов Д., АВВУУ.

ТЕХНОПАРК
14.11.2013 "Яблочная разработка", Обухов Д., АВВУУ.

ТЕХНОПАРК
20.09.2013 HR-собеседование

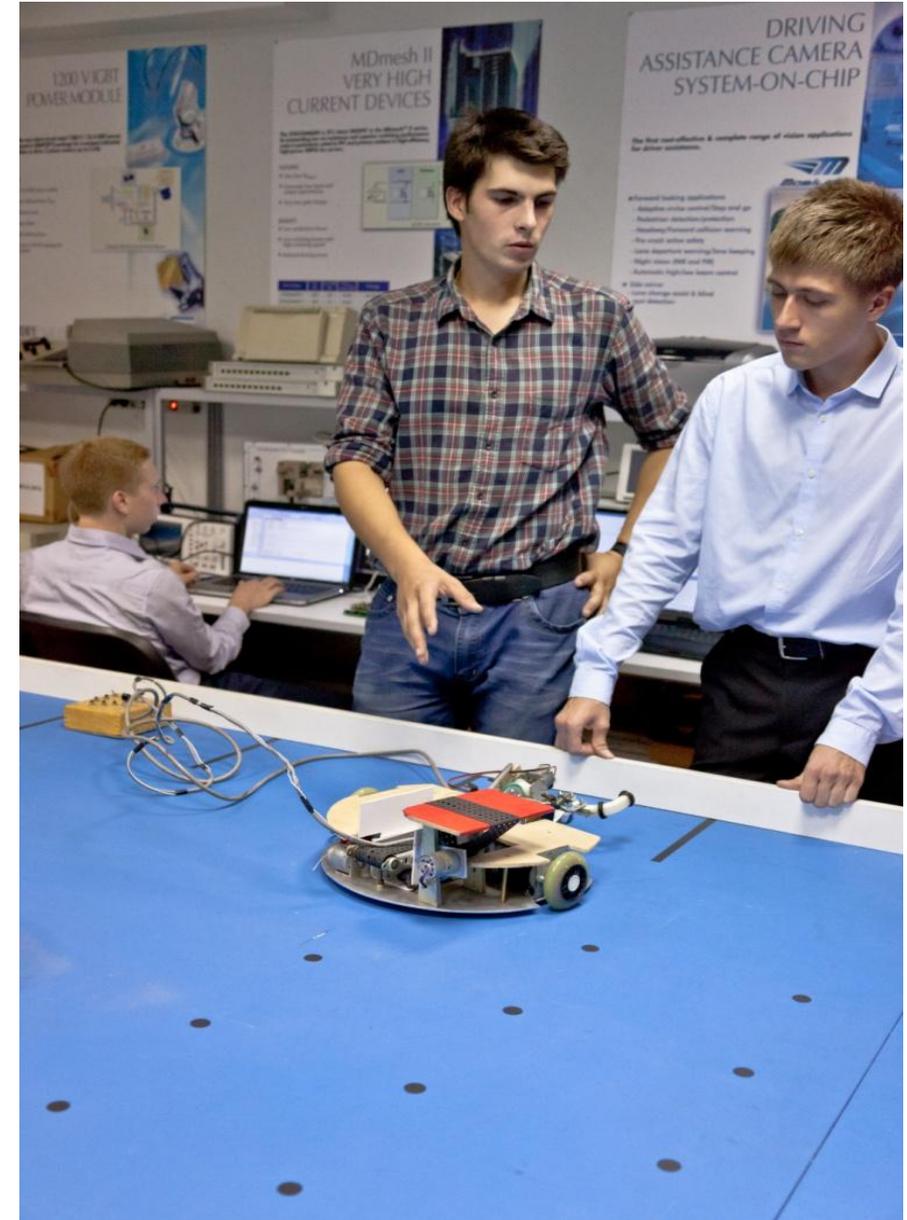

Engineering Center «BMSTU- National Instruments»

Nanoengineering Laboratory

Faculty of Computer Science and Control Systems

IU-1 Automatic control systems

IU-2 Instruments and systems for orientation, stabilization and navigation

IU-3 Information Systems and Telecommunications

IU-4 Design and manufacture of electronic equipment

IU-5 Information processing and management systems

IU-6 Computer Systems and Networks

IU-7 Computer software and information technologies

IU-8 Information Security

IU-9 High-performance computer technologies

IU-10 Security in the banking sector

IU-11 Space systems and complexes

THE MAIN DIRECTIONS OF SCIENTIFIC AND EDUCATIONAL ACTIVITIES

- Artificial intelligence;
- Information and communication technologies, big data, decision support systems;
- Computer systems and networks, Internet of Things;
- Mathematical modeling of complex processes and objects using supercomputer technology;
- Intelligent control systems;
- Creation of a comprehensive information security system for infocommunication structures;
- Software Engineering;
- Systems of orientation, navigation, control of moving objects;
- Modern devices and electronic equipment.

More than 900 employees

45 doctors of Sciences, 140 candidates of sciences

EDUCATION: DISCIPLINES concerned to ARTIFICIAL INTELLIGENCE

Theory of artificial intelligence
Artificial intelligence technologies
Intelligent control systems.
Technologies for working with big data
Elements of artificial intelligence in control systems
Methods of evolutionary optimization
Neural network technologies in system analysis tasks
Methods and technologies of intelligent computing and machine learning
Methods and technologies of artificial intelligence
Methods and technologies of pattern recognition
Parallel and distributed computing
Algorithms for determining the parameters of objects in the video stream
Extracting knowledge from the data warehouse
Multi-agent intelligent systems
Knowledge representation in information systems
Cloud technologies
Mivar technologies of logical AI

Complex problem-oriented algorithms of narrow AI
Complex graphs
Knowledge storage and processing systems
Process Mining
Models of consciousness
Goal setting models
Intelligent technologies and systems
Cognitive support technologies
The art of analytical work with big data
The art of system engineering and management of organizations
Big Data Mathematics
Hybrid AI Methods for Big Data processing
Data Interpretation and Visualization
Methods Machine Learning methods
Methods of modeling and analysis of socio-economic processes and phenomena
Big Data processing methods
Neural network methods of big data analysis
Intelligent technologies in information security

Thank You for Your Attention!
